

Green Apartments, Chalets and Hotels

Energy efficiency has always been the norm in the mountains or people couldn't stay warm and businesses efficient. Infact studies have shown mountain buildings typically use much less energy than buildings using air conditioning in warm climates. But standards continue to improve dramatically and here's a list of properties that go the extra mile in the fight against climate change in ski resorts.

August 2021

Alpe di Siusi, **ICARO**

In 2010, the ICARO became the first climate-neutral hotel in the Dolomites. Sourcing its green electricity from hydropower, using environmentally friendly cleaning agents and compensating for CO2 emissions through certified climate protection projects, the hotel was awarded the EU Ecolabel for its sustainable and environmentally conscious management.
